

2005 AHR Expo Showing a Success!

Buffalo, NY ... February 28, 2005 – Hydro-Air Components Inc., a Western NY hydronic heating and cooling manufacturer, recently returned from a successful exhibition at the world's largest air conditioning, heating and refrigeration convention. Celebrating its 75th year, the 2005 AHR Expo in Orlando, Florida recorded 1,871 exhibiting companies.

Showcased to an international audience of approximately 45,000, Hydro-Air's full line of 'Rittling' heating and cooling equipment sparked inquiries from hundreds of Sales Representatives, engineers and contractors from around the world. Displaying the latest in hydronic coil and fan technology, Hydro-Air highlighted its expansive Rittling Fan-Coil cooling line that includes 13 models in more than 20 arrangements. Hydro-Air's custom-build capabilities generated interest from HVAC professionals in several U.S. territories that are new to the company; within two weeks of the event, Hydro-Air is looking forward to signing six new Independent Sales Representative firms in the Southern United States.

Success to date has resulted in significant growth in the company's forced-air heating and cooling product lines. Future growth projections have required Hydro-Air to relocate and expand its entire fanned production and engineering teams to its second manufacturing facility located in Hamburg, NY. The expansion will insure the continued success of Hydro-Air's ability to have the industry's best quality and delivery of standard and custom designed hydronic heating and cooling products.
